Connecting to Darden VPN on a iOS Mobile Device

In order to access most Darden Camp Library databases off-grounds, you will need to connect to the Darden VPN. Below are instructions on how to configure your iOS mobile device (iPhone, iPad, etc) to be able to connect to the VPN.

1. Before you can configure the VPN, you will need to make sure you have registered your device with UVA.
   a. If you are currently able to connect to the “wahoo” wireless network, you have already completed this process and can move onto step two. You can also check if you device is registered by going to http://netreg.virginia.edu, signing into NetBadge, and clicking “View and edit existing device registrations” and viewing what devices you already have registered.
   b. If your device is not currently registered, follow the instructions below before moving on to step two to register your device.
      i. While on grounds, connect the device to the “Welcome to UVA wireless” network.
      ii. Open your browser (such as Safari). Go to http://netreg.virginia.edu.
      iii. On this page you should see 3 buttons. If there are only two, check your web address. Tap the left button to register a device for yourself, then log in with your UVA NetBadge userid and password.
      iv. On the next page, your hardware address will automatically be filled in. For “Is this a wireless device?” select “Yes” from the drop down menu. Type an identifying note for the device in the text box, then click submit.
      v. Go back to the wireless menu and tap the blue “i” in the circle next to “Welcome to UVa wireless”. Select “Forget this network.”
      vi. Add a new network called “wahoo” by tapping “Other” under “Choose a network.” Leave the security setting at “None” and tap “Join.”
      vii. It could take up to 15 minutes for the registration to successfully pass through UVA’s system. When the process is complete, your device will automatically connect to “wahoo.”
    viii. If the process is unsuccessful, please ask a library staff member for assistance or visit the technology service desk.

Instructions adapted from “How To: Register a device for UVA’s wahoo wireless network” from the Darden Technology Services’ Service Desk section in the Darden Portal (http://mbaportal.darden.virginia.edu/dts/ServiceDesk/SitePages/UVA%20wireless%20Setup.aspx)
2. Once your device is registered, you can start configuring your device to connect to the Darden VPN. **Begin by opening your Settings menu and selecting General.**

3. Scroll to the bottom of the menu and **select VPN.**

![Settings menu showing VPN section]

4. **Tap “Add VPN Configuration.”**

5. **Select PPTP from the three options at the top of the screen.**

6. In the “Description” field, enter something, such as “Darden VPN,” that will identify the VPN.

7. In the “Server” field, enter the server address **128.143.59.32.**

8. Enter “darden\" followed by your Darden user name in the “Account” field.

9. You can enter your Darden password in the “Password” field at this stage if you'd like; otherwise, you will be prompted for it each time you connect to the VPN.

10. **Tap “Save.”**
11. You should now see the VPN configuration you just created in the VPN menu. **Tap the slider next to “Not Connected.”** You may be prompted for your password.
12. When you are successfully connected to the VPN, a small “VPN” will appear on either the left or right side of the time at the top of your screen. You are now free to browse any of the Darden Camp Library's databases from your mobile device (some resources may still prompt you for your NetBadge ID).

13. From this point forward, **to connect or disconnect from the Darden VPN, simply navigate into the Settings menu** and tap the slider next to VPN.

14. Remember, if you are on grounds and connected to wahoo, you will not need to turn on the VPN. If you have any questions, please ask a library staff member.
