Unable to access library information sources like Statista, D&B Hoovers, or Investext Plus*? Make sure you’re connected to the Darden VPN

- **To connect:**
  - Open the menu you use to change wireless networks
  - Click on **DardenVPN**
  - Click **Connect**

- **Frequently asked questions:**
  - **Do I need to connect to the VPN even if I’m on the wahoo wifi network?**
    
    Yes. Many of the library’s resources are only available to the Darden community and not the rest of UVA. Connecting to the VPN allows you to access databases that are only available to Darden.
  
  - **Can I use the VPN to access databases from home?**
    
    Absolutely! You can use the VPN to access our databases from just about anywhere with Internet access.
    
    - The VPN should already be set up on your Darden computer. If it isn’t, or it’s not working, stop by the computing services window or email them at HelpDesk@darden.virginia.edu

* Not sure what these are? **Need to do some research?** Talk to a librarian or email us at library@darden.virginia.edu today!
